

# Inspection

Remove the parts from their packaging and carefully check that the kit contains all the parts listed on the delivery document. Familiarize yourself with each part and learn where it goes. Keep the parts clean at all times.

**WARNING**

A SIBS unit must not be contaminated with any external matter that may adversely affect its operation and reliability

## Suggestions:

- Inspect each brake and supplied items against the packing list included in the shipment.
- Ensure all items are included as described.
- Ensure all components remain in their original packaging until required for assembly.
- Ensure vehicle stub shafts are clean, free from rust, dirt, corrosion or any foreign material.
- Thoroughly read the Service Manual. Familiarize yourself with the tools required and prepare them for use; familiarise yourself with the parts of the brake and the process required for fitting each brake and control system.
- Ensure complete cleanliness of all brake components and the working environment around the vehicle.
- Ensure no contamination of the brake assemblies occurs during installation.
- Follow the points in the manual as described; if you are not sure – check the Manual.
- Place each brake close to the vehicle adjacent to the axle where the brake is to be fitted, ensuring that they cannot be contaminated by any foreign material.
